SUMMARY

Data Engineer with over one year of hands-on experience building and operating batch ETL/ELT pipelines across relational databases, internal systems, and external REST APIs. Experienced in developing data pipelines on Google Cloud Platform using Google Cloud Storage, BigQuery, and Google Compute Engine. Strong in Python, SQL, Airflow, dbt, dimensional modeling, data validation, pipeline monitoring, failure investigation, and backfill processing. Skilled in transforming multi-source data into reliable, reporting-ready datasets for product, financial, and business analytics.

PROFESSIONAL EXPERIENCE

Project-based Data Engineer, L'INNO

Mar 2025 - Present

Remote/Part-time

– Project: Blue Dragon Reporting Platform

- Maintained and enhanced the Blue Dragon reporting platform, taking ownership of the existing GiveCloud flow and developing the PayPal reporting extension.
- Built a Python-based data collector to ingest transaction data from four regional PayPal REST APIs across Vietnam, the US, the UK, and Australia.
- Developed an end-to-end pipeline to store raw data in Google Cloud Storage, transform and load structured data into BigQuery, and integrate PayPal transactions with GiveCloud donation data.
- Designed fact and dimension models for transaction reporting, donor segmentation, recurring donations, and revenue trend analysis.
- Automated daily workflows with GitHub Actions, including scheduling, retries, monitoring, failure investigation, and data backfills.
- Built Looker Studio dashboards and created source-to-target mappings between donor and transaction data and Salesforce objects/fields.

Data Engineer, Savvycom - Software Product Development

Sep 2025 - Apr 2026

Full-time

– Project: Internal Analytics Data Pipeline

- Built ELT workflows to ingest and transform data from Timesheet, CRM, and ERP systems for internal analytics use cases.
- Analyzed 1,600+ source tables across PostgreSQL and MariaDB systems to identify reporting-relevant entities and remove metadata/system tables.
- Documented source-to-target mappings and developed dbt models to structure raw data into a reporting-ready layer.
- Orchestrated daily ingestion, transformation, and validation tasks using Airflow.

– Project: Accounting BI Dashboard

- Designed a Microsoft-based BI reporting solution using OneDrive files, Power Query, and Power BI for Accounting reporting use cases.
- Cleaned, standardized, and modeled financial data into reporting-ready datasets for expense tracking and operational monitoring.
- Built and maintained Power BI dashboards to support financial reporting and business analysis.

PROJECTS

Financial Market Data Collection & ELT Pipeline | Personal Project

Feb 2026 - Apr 2026

- Developed Python collectors using requests to retrieve and parse JSON data for OHLC prices, company listings, financial filings, and news sentiment from Polygon, Alpha Vantage, and SEC APIs.
- Deployed a Hadoop single-node cluster with HDFS and YARN on Google Compute Engine, then configured Spark/PySpark for data processing.
- Implemented data validation for missing values, duplicate records, API response status, and schema consistency before downstream processing.
- Designed a dimensional warehouse in DuckDB with three fact tables and four shared dimension tables for price, volume, company, and sentiment analysis.
- Implemented Spark-based transformations for cleansing and warehouse preparation, orchestrated end-to-end with Airflow DAGs.

Student Performance Prediction Pipeline | iBME Lab, HUST

Jul 2025 - Sep 2025

- Built a data processing pipeline to clean, standardize, and prepare approximately 1M student records for GPA/CPA and course-grade prediction.
- Engineered features and developed prediction models using Python, Pandas, and Scikit-learn.
- Developed a Streamlit web application for result visualization and exploratory analysis.

SKILLS

Programming & Software Development

- Programming languages: Python, SQL
- Development: REST API, Git, GitHub Actions, CI/CD, Docker
- Tools: Airflow, dbt, dlt, Power Query, Jupyter Notebook

Data Engineering & BI

- Data Engineering: ETL/ELT, Data Ingestion, Batch Processing, Workflow Orchestration, Data Validation, Pipeline Monitoring
- Data Processing: Spark, PySpark, Pandas
- Data Modeling: Data Warehouse, Data Lake, Source-to-Target Mapping, Fact & Dimension Modeling
- Databases / Warehouse: BigQuery, PostgreSQL, MariaDB, DuckDB
- Visualization: Power BI, Looker Studio, Metabase

Soft Skills

- Problem-solving, Requirement Clarification, Communication, Teamwork & Collaboration
- English: Aptis B1 (CEFR)

EDUCATION

Bachelor of Engineering in Electronics and Telecommunications Engineering

2020 - 2025

Hanoi University of Science and Technology

Specialization: Computer Engineering

Degree Classification: Good
